WHAT THE NEWSPAPERS DON'T TELL :

PIGEONS ARE  USEFUL
ENTERTAINING, EXCITING
EDUCATIONAL

- man's earliest domestic birds (over 3000 years); religious symbol.
- gleaners of grain fields, weed seeds.
- normally clean and healthy, bathe in water.
- normally mate for life; much similarity with human behavior.
- homing pigeons first used as messengers, later for racing sport.
- pigeon farms supply gourmet restaurants with squabs - delicious dark meat.
- pigeon manure is nearly odor-free, rich fertilizer for gardens.
- pigeons and doves important in vitamin history, physiology, psychology, neurology and vision research.
- educational for biology classes, 4-H, fun-hobby projects.
- decorative, for example Fantails or Capuchins free-flying.
- very tolerant of heat and cold, can breed all year.
- care and feeding simple, small coops suitable.
- many thousands of fanciers world-wide, city and country, from all walks of life, all ages.
- enjoyable competition in flying performance, breeding for exhibition, buying and selling.
